#### **Unit I: Resource and Reserves**

Resource and reserve definition, International efforts in standardization, SPE PRMS project, Discovery, Commerciality, project based resource assessment, Risk and Uncertainty, Risk measures, Proved, Probable and Possible Reserves, Incremental projects, Deterministic or Probabilistic resource, Unconventional resource, project based resource evaluation, prospective resource, Contingent resource (1C, 2C and 3C)

### **Unit II: Commercial Considerations**

Commercial Evaluations, Economic Limits, Non Hydrocarbon components, PSC and entitlement, contract limits, contingent resource versus 3P, common grey areas in SPE-PRMS, resource aggregation

## **Unit III: Reporting System**

SEC, NPD, UNFC, Russian and Canadian Guidelines, Russian Mapping to PRMS, Canadian NI51-101 COGEH system, Monte Carlo Simulation,

Unit IV: Estimation Tool Hours: 10

Use of Crystal Ball, Performance based reserve estimation, Decline Curve Analysis, P/Z plots, history matched simulation, diagnostic plots, pitfalls of estimation

Tax, Royalty, Production Sharing (Risk) service, Joint Venture, Reactivation, ownership of resource, payment, economic drivers, operational freedom

**Total Hours: 42**

Unit I : Introduction Hours: 12

Composition, Physical & Thermal properties, Phase Behavior; Fields & reserves in India and energy scenario; major NG producing industries of India and their contribution to Indian economy; techniques of utilization

### **Unit II: Gas Processing**

Conventional and advanced separation techniques; sulphur recovery; LPG, LNG & CNG systems; specifications of NG for transportation in pipelines , NG Utilization: uses, underground storage, conservation & concept of peak shaving etc.

CBM, NG hydrates & in-situ coal gasification, conversion of gas to liquid (GTL)

### **Unit III: Natural Gas Development Engineering**

Compression calculations; gas flow measurement; compressor sizing, development and operation in gas fields; Gas from condenastae and Oil fields; Field separation and oil absorption process; Low temperature processing; Dehydration and Sweetening;

## Unit IV: Marketing, Retailing and Gas Trading:

Gas station and marketing; City gas distribution system; Government regulations; Natural Gas demand and supply; Natural gas – Spot and Future Markets; End User engineering

## **Unit I:** Petroleum Production Engineering Fundamentals

Petroleum Production System- Role of Production Engineer, Well Completion, Well tests and Well test analysis

## **Unit II: Production Testing**

Inflow Performance Relationship (IPR), Construction of IPR curve using Test Point, IPR for Two phase reservoir using Vogel's equation, concept of Productivity Index, Future IPR, Various flow regimes in wellbore.

### Unit III: Artificial Lift Methods

Overview of artificial lift technology, Criteria for selection of artificial lift system, Reservoir performance, Artificial lift screening, Sucker Rod Pump (SRP), Gas Lift System, PCP, ESP system, Gas lift design: mandrels, valves, injection gas requirements, temperature, chokes, spacing, equilibrium curve, continuous flow design.

### **Unit IV: Production Enhancement**

Introduction, Well Analysis and Remedial Measures, Low Productivity – Stimulation, Excessive Production of unwanted fluid, Water Control, Sand Control, Production Optimization, Best practices for installation and maintenance, Economic analysis

**Total Hours: 42** 

Hours: 12

Hours: 10

### **Unit I: Reservoir Properties & Darcy's Law**

Bulk volume, Grain Volume, Effective Pore Volume and Net Volume. Porosity, Compressibility, Darcy's Law. Absolute and Effective Permeability, Permeability averaging, Transmissibility, Measurements of Permeability heterogeneity, Darcy's law of directional permeability, rock fluid interactions.

### Unit II: Fluid and rock properties

Wettability, Capillary Pressure, correlation of capillary pressure to rock properties, Equivalent height and transition zone, mobility, relative mobility and flow capacity. Drivers of reservoirs

#### **Unit III: Reserve Estimation**

Reservoir Drive Mechanism, Reserve determination, Volumetric, and Material Balance, gas well deliverability, Production Performance ratio, Production Stages,

## **Unit IV : Fluid Displacement**

Flow in porous media, flow units, Fractional flow, The Buckley-Leverett Theory, Welge's Method, Frontal Advance, Linear Stability Analysis, Well patterns, Fluid Coning, Pressure maintenance. Productivity Index, Specific Productivity Index, Continuity equation and its derivation; Diffusivity equation and its different forms

Unit I: Heat Transfer Hours: 12

Conduction: Steady-state and transient flow through various geometries, Convection: LMTD and NTU, overall heat transfer coefficient. Application of dimensional analysis to convection. Heat transfer rate and Heat transfer coefficient calculations. Double pipe parallel and counter-flow heat exchangers, natural and forced convection through tubes and outside tubes, Shell and tube heat exchanger, and finned tube heat exchanger. Boiling of liquids and condensation of vapors

Unit II : Radiation Hours: 10

Radiation from black and real surfaces, radiation transfer between black and grey surfaces, view factor, radiation shield, and multi-sided enclosures., Thermal insulation, Economic and critical thickness of lagging.

Unit III : Mass Transfer Hours: 10

Diffusion in gases: Fick's law, determination and estimation of diffusion coefficient; diffusion through stagnant gas and equimolecular counter-diffusion. Diffusion in liquids: Mass transfer across phase boundaries, two-film theory and mass transfer coefficient.

Unit IV Hours: 10

Gas Absorption, adsorption, and Distillation (flash and differential): Basic principles, laws, and calculations. Equilibrium, co-current and counter-current operations. Ideal stage concept and calculation of number of ideal stages. Efficiency. Packed bed and tray columns

**Total Hours: 42**

Unit I Hours: 5

Historical background of the Oil and Gas trading, , Geopolitical history of Hydrocarbon exploration and trading, Life cycle of Petroleum Project, Fiscal System in hydrocarbon industry, Basic elements of Contracts, Basic terminologies of contract and legal. Basics of Upstream and Downstream regulatory Laws and Policies.

Unit II Hours: 12

Contracts in E & P Industry, Classification of contracts, Concession style, Sharing contracts- Production Sharing Contract, Terminologies, Attributes of PSC, Different PSC Models (Indonesian, Indian, Nigerian, Chinese, Equatorial New Guinea, etc). Risk Sharing Contracts, Joint Operating Agreements, JOA attributes, JOA Models, Farm out Agreements, Rig procurement contracts-Design and Fabrication aspects

Unit III Hours: 5

Elements of Transportation, Hydrocarbons transport, Contracts related to bougers, ship and pipeline, Tarrif mechanism- national and International, LNG contracts, LNG taxation and charges. Oil Tanker

Unit IV Hours: 6

Hydrocarbon trading-Oil trading, Physical and Paper; Crude oil Markets- Spot, Barter, Future and forward. Oil Pricing mechanism, short term and long term, Level playing and swaping. Hydrocarbon Strategic storage, Contract Arbitration and dispute settlement.

**Total Hours: 28** 

- 1. Shippey, K. C. (2009) A short course on international Contracts, 4<sup>th</sup> Ed. World Trace press.
- 2. Tordo, S (2007) Fiscal System in Hydrocarbons: design issues. The World Bank
- 3. Ministry of P & G (Government of India) Model Production Sharing Contracts
- **4.** Johnston, D (1994) International petroleum fiscal system and Production sharing contracts, Penn Well books.
