COURSE OBJECTIVES

- To be able to evaluate problems related to differential and integral calculus of complex functions
- To be able to obtain area, volume using integral calculus.
- To be able to formulate and solve various engineering problems using the calculus
- To study the properties of Matrix algebra and apply them to solve system of algebraic equations

UNIT I DIFFERENTIAL CALCULUS AND ITS APPLICATIONS

8 Hrs.

Partial derivative and its application, Euler's theorem - Total derivatives - Jacobians - Maxima and Minima of two variables using Lagrange's multipliers. Convergence of infinite series.

UNIT II INTEGRAL CALCULUS AND ITS APPLICATIONS

12 Hrs.

Definition Evaluation of double integral (Cartesian - Polar form) - Change of orders - Change of variables - Evaluation of triple integral, change of variables (Cartesian to spherical and cylindrical) Applications, area - volume - center of mass - center of gravity by double and triple integral.

UNIT III MATRIX ALGEBRA AND ITS APPLICATIONS

10 Hrs.

Solution of system of algebraic equation - Rank of a matrix, consistency of system of equation - Characteristic equation of a square matrix- Eigen values and Eigenvectors of a real matrix - Properties of eigen values and eigen vectors - Cayley-Hamilton theorem (without proof) - finding inverse of a matrix - Diagonalisation of a matrix using orthogonal transformation.

UNIT IV VECTOR CALCULUS

10 Hrs.

Gradient, divergence and curl – Directional derivative – Irrotational and Solenoidal vector fields – Vector Integration – Simple problems on line, surface and volume integrals – Green's theorem in a plane, Gauss divergence theorem and Stoke's theorem (without proofs) – Simple application involving cubes and rectangular parallelepipeds.

Max. 40 Hrs.

COURSE OUTCOMES

On completion of the course, student will be able to

- CO1: Identify the use of convergence of infinite series in engineering aspects
- CO2: Understand the concept of Directional derivative, Irrotational and Solenoidal vector fields
- CO3: Develop the ability to apply appropriate tool/method to extract the solutions of engineering problems
- CO4: Analyse the obtained solution in context with theory
- CO5: Appraise mathematical problems from real to complex domain
- CO6: Evaluate problems on Green's, Stoke's and Divergence theorems

3. Erwin Kreyszig, Advanced Engineering mathematics, John Wiley, 10th Edition, 2015.
4. G. Strang, Linear Algebra and its applications, 4th Edition, Cengage Learning, 2005.
5. K. Hoffman and R. A. Kunze, Linear Algebra, Prentice Hall of India, 2002.

END SEMESTER EXAMINATION QUESTION PAPER PATTERN

Max. Marks: 100

- Part A: 10 questions 3 marks each
- Part B: 5 questions 6 marks each
- Part C: 5 questions 8 marks each

Exam Duration: 3 Hrs.

- 30 Marks
- 30 Marks
- 40 Marks
